Secure Coding(L23 + L24)

Lab - 12

Name :- MD Shafiq Ahmed

Reg no :- 18BCN7122

Secure Coding Lab Audit

VULNERABILITY REPORT

SATURDAY, JUNE 12, 2021

MODIFICATIONS HISTORY

Version	Date	Author	Description
1.0	06/12/2021	18BCN7122_Shafiq Ahmed	Initial Version

TABLE OF CONTENTS

1.	General Information	4
1.1	Scope	4
1.2	Organisation	4
2.	Executive Summary	5
3.	Vulnerabilities summary	6
4.	Technical Details	7
4.1	Shell Code Injection	7
4.2	Buffer Overflow	9
4.3	DOM XSS	11

GENERAL INFORMATION

SCOPE

VIT has mandated us to perform security tests on the following scope:

- Entire infrastructure

ORGANISATION

The testing activities were performed between 01/06/2021 and 12/06/2021.

EXECUTIVE SUMMARY

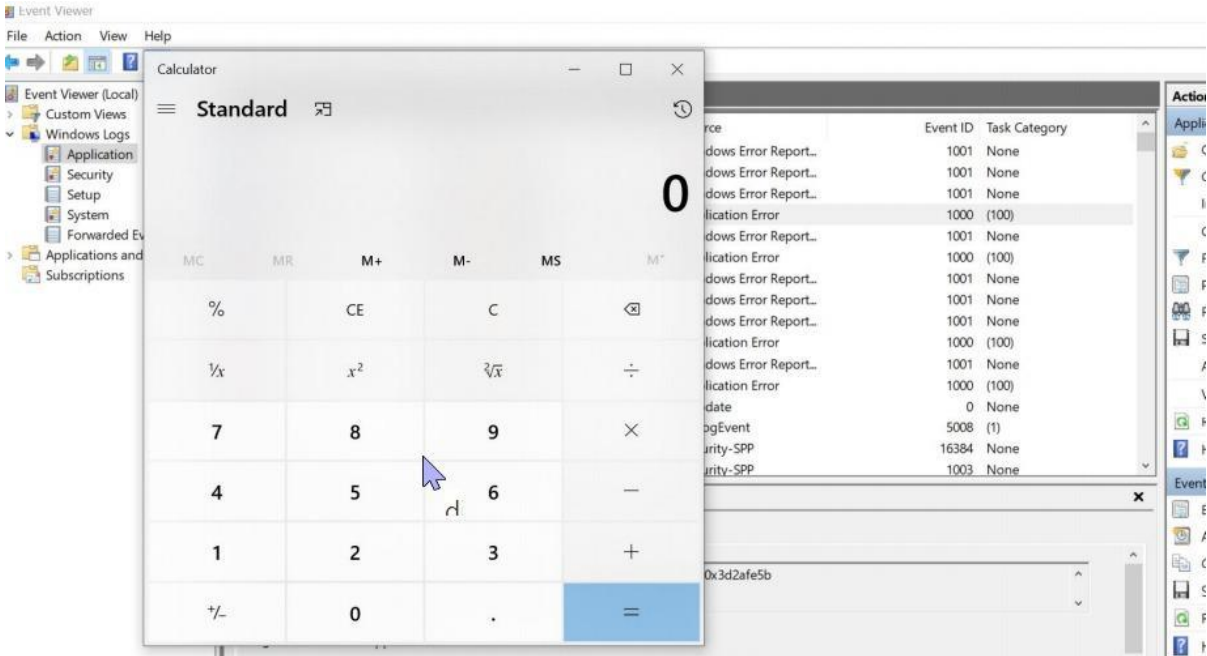

VULNERABILITIES SUMMARY

Following vulnerabilities have been discovered:

Risk	ID	Vulnerability	Affected Scope
High	IDX-002	Shell code injection	
High	IDX-001	Buffer overflow	
High	IDX-003	DOM XSS	

TECHNICAL DETAILS

SHELL CODE INJECTION

CVSS SEVERITY	High	CVSSv3 SCORE	8.9
CVSSv3 CRITERIAS	Attack Vector : Network Scope : Changed Attack Complexity : Low Confidentiality : Low Required Privileges : Low Integrity : High User Interaction : Required Availability : High		
AFFECTED SCOPE			
DESCRIPTION	Shell Code Injection is an attack that consists in executing commands on a victim's operating system via a vulnerable application.		
OBSERVATION	We have identified that this vulnerability can execute different malicious code and even trigger different application including command prompt.		
TEST DETAILS	 <p>Image 1 – image.png</p>		
REMEDIATION	<ul style="list-style-type: none"> Addressing buffer overflow vulnerability. Input sanitization. Input validation (we may use regular expressions for validation). Implementing ASLR, DEP, SEH.

BUFFER OVERFLOW

CVSS SEVERITY	High	CVSSv3 SCORE	8.9
CVSSv3 CRITERIAS	Attack Vector : Network Scope : Changed Attack Complexity : Low Confidentiality : High Required Privileges : Low Integrity : Low User Interaction : Required Availability : High		
AFFECTED SCOPE			
DESCRIPTION	In a buffer overflow attack, the extra data includes instructions that are intended to trigger damaging activities such as corrupting files, changing data, sending private information across the internet, etc. An attacker would simply take advantage of any program which is waiting for certain user input and inject surplus data into the buffer.		
OBSERVATION	We have observed that buffer overflow potentially crash an application and unknowingly allows command injection attacks.		

TEST DETAILS

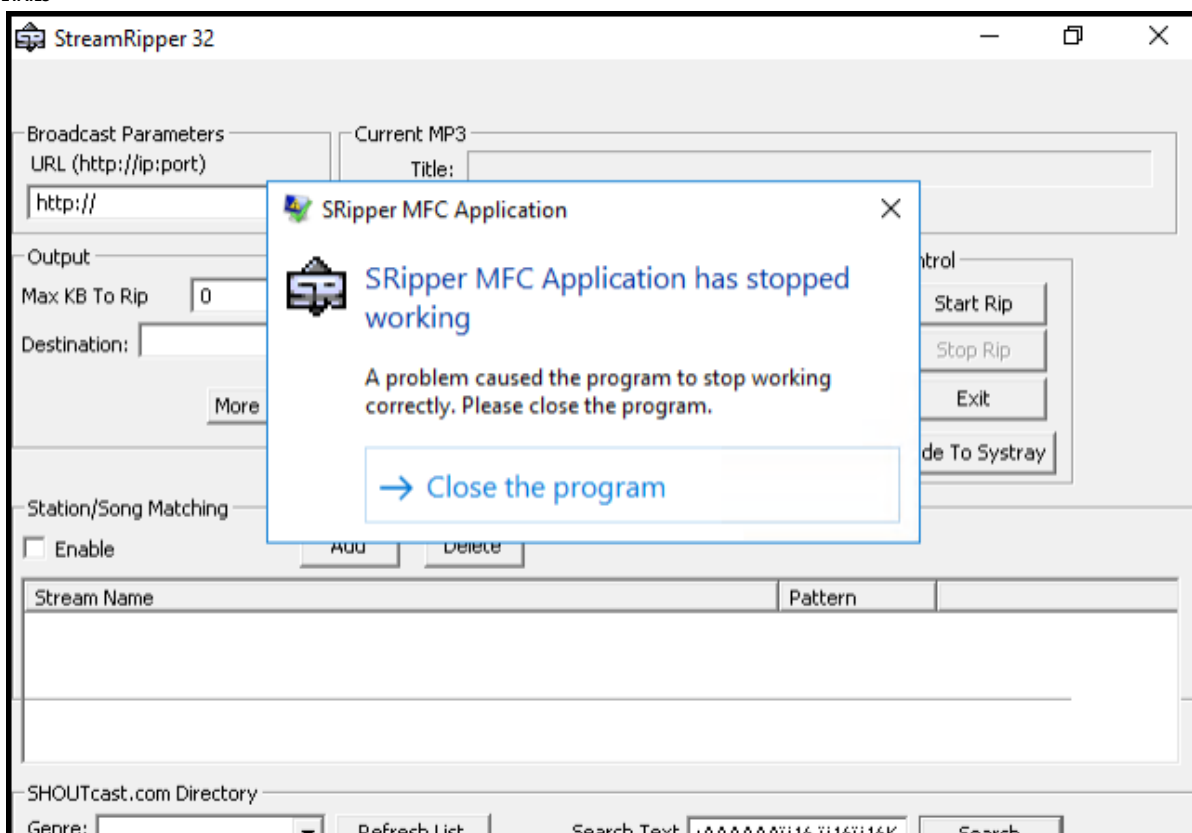

Image 1 – image.png

REMEDIATION	<ul style="list-style-type: none"> • ASLR • DEP
--------------------	---

	<ul style="list-style-type: none">• SEHOP

DOM XSS

CVSS SEVERITY	High	CVSSv3 SCORE	7 . 6
CVSSv3 CRITERIAS	Attack Vector : Network Attack Complexity : Low Required Privileges : Low User Interaction : Required	Scope : Changed Confidentiality : High Integrity : Low Availability : None	
AFFECTED SCOPE			
DESCRIPTION	DOM XSS stands for Document Object Model-based Cross-site Scripting All HTML documents have an associated DOM that consists of objects, which represent document properties from the point of view of the browser. When a client-side script is executed, it can use the DOM of the HTML page where the script runs.		
OBSERVATION	1)Open any url which you want to test let's say https://www.incrypts.com/ 2) now just put <html>		
TEST DETAILS			
REMEDIATION	USE USER INPUT VALIDATION AND WAF
